Dollar weakness and China stimulus keeps market volatile

Please Read this before you trade: We strongly recommend traders to use some discretion on entry and exit points based on product volatility and multiplier. For the gold, flexibility in entry or exit could be Rs 20-50 due to volatility. Use your own discretion based on assets. Target 1 is conservative objective where low risk trader should book full profit, high risk trader should book part profit. Target 2 is best case profit objective where full profit may be booked. Avoidance of impulsive and compulsive trading is good habit. These levels and strategies are designed as per prevailing scenario. Any new data set or event or headline could increase/ decrease or nullify its effectiveness.
