

Profit taking pressures gold- Metals are also seen in corrective sell off

Read before you trade: We strongly recommend traders to use some discretion on entry and exit points based on product volatility and multiplier. Outlook, entry and exit points valid for very short term unless specifically mentioned as positional. Sl is 15 minute basis and often given as a tentative SL. Now a days Algo or dabba traders read limits and if SL placed in advance- its 99% chance of getting stopped out. Tentative SL is valid for 15 minutes. Means if price stays above or below that level- positions should be closed out. (These levels are not applied where trades are based on accumulation or scale up selling and bet is HIGH RISK- POSITIONAL COUNTER TRADES-But such trades are either a hedge trade or fully customized based on underlying risk profiling and mostly designed for end users.) Levels are indicative. Given extra ordinary volatility trading should be done in Mini gold or Silver only. Dabba trading or CFD is short cut to ruin. House always win is the golden rule.
